

Permission Add-In

Permission Addin - SharePoint Online Add-In for Office 365 allows users to find who has access within a site collection and how that access is given. The PermissionAddin get Permissions action is a real-time feature, that is, if an account is newly mapped to a permission level on a SharePoint object, such as a site, list will be found immediately in the PermssionAddIn Permissions report.

- Ability to read users from AD groups (Security groups) and SharePoint groups used in SharePoint
- Ability to read SharePoint access permissions for all users
- Ability to list all user(s) (individual and group users) with access to selected list or library
- Ability to list user permission (Read, Contribute, Full Access etc.,) for a given list or library
